

TOZER SEEDS

VEGETABLE SEED EXPERTISE

the taste of innovation

INTERNATIONAL WHOLESALE CATALOGUE

www.tozerseeds.com

Tozer Seeds wholesale catalogue **100% British bred**

Tozer Seeds is a strong, independent, family owned, British vegetable plant breeding company. We've been committed to developing and supplying new varieties of vegetables to growers for over 75 years and we pride ourselves on our dedication to quality and innovation within plant breeding. In this catalogue you will find Tozer-bred varieties, all of which have been developed by our breeders in the UK, but cultivated by growers across the world.

We aim to respond quickly to the ever changing demands of our market and thus provide our customers with the innovation and quality they need to ensure their own growth and prosperity.

Not only are we focused on agronomic traits such as yield and disease resistance, we also actively breed for more consumer centric qualities such as appearance and flavour.

For instance we're helping sustain the renewed interest in kales with a selection of new varieties and types such as Emerald Ice and Buttonhole Kale® (page 13). We've also developed an entirely new vegetable; Kalettes®, formerly known as Flower Sprout®, which is a licensed product.

We are at the forefront of new product development in the vegetable world, our size and structure allows us to offer our customers exceptional service and product quality, plus access to our unique new product developments and niche type vegetables. If you are interested in finding out more please do contact us on our website: www.tozerseeds.com, where you can also find more information about our product lines as well as many downloadable specialised brochures.

Leek

ALLIUMS

In recent years Tozer Seeds has introduced hybrid leek varieties for both the fresh and the processing market. The latest varieties have started to gain market share in the main leek production areas across Europe and further afield. The varieties can be placed in various maturity slots and provide growers with a high marketable yield.

Hybrid Varieties

LEE 112 TZ 0233 F1  **EARLY**

Second early variety that bulks quickly. Good dark blue-green foliage which contrasts well with the lengthy white shank. Trials have shown this variety to be a consistent performer with good uniformity, bulbing resistance and field resistance to rust.

LEE 171
Lancaster TZ 7271 F1  **MID/LATE**

Following the introduction of the first hybrid leeks for processing, Tozer Seeds has worked hard to develop a hybrid leek variety for the fresh market. With Lancaster we can offer you a winter hardy leek with very strong cold resistance. Its dark, erect flag is resistant to delamination. Lancaster produces long, bulb free shanks within the harvest window November to January, and also has a good bolt resistance during this period.

NEW

LEE 169
TZ 0188 F1  **MID/LATE**

TZ 0188 is a month earlier to mature than our popular variety Lancaster and has a very erect leaf habit with long bulb free leeks. It will stand well in the field until late February and has good cold weather tolerance.

NEW

Open Pollinated Varieties

LEE 190  **EARLY**
Swiss Giant - Zermatt

The earliest in our series of open pollinated varieties. This variety is in great demand for the baby leek market. Long shank, with erect leaves and a good base.

LEE 155 Autumn  **MID**
Mammoth - Tornado

This variety is excellent for full size production and can also be used as a baby leek. The plants are bold, with mild green leaves and a good shank.

LEE 175
Warwick TZ 9249  **MID**

Our earliest hybrid variety, maturing from September and holding well until late November. It has very good vigour and bulks quickly, producing good quality bulb free leeks that peel easily.

NEW

LEE 179 Blue Green
Autumn - Neptune  **MID/LATE**

Another in our series of outstanding open pollinated leeks. Neptune follows on from Tornado into the spring. Hardy, dark blue-green plants with a good shaft length. Has some rust resistance and peels well for a quick pack out.

Salad onions

ALLIUMS

For production around the globe, the *Allium cepa* is a well adapted product. The bunched types are now available in the supermarkets year round from different regions. Tozer Seeds can offer varieties for summer production as well as overwintering types. We can also offer niche types and we will continue to develop the *cepa* x *fistulosum* crosses with better peeling qualities and growing habit.

ONI 60 Eiffel

A white Lisbon type but with distinctive stiff upright leaves which shed water very effectively, making Eiffel less susceptible to disease at difficult times of the season. Slow to bulb, especially in the long days of summer. A very versatile variety, which although predominantly for spring and summer production, will overwinter with careful crop husbandry. An ideal companion for Ramrod, especially during the summer cropping period.

ONI 106 Apache

Attractive and versatile red skinned variety with mild flavour and crisp texture. Apache has been developed to satisfy the market demand for a vibrant red salad onion which also peels easily. For spring, summer and autumn production.

ONI 225 Ramrod

A distinct Tozer Seeds salad onion which has proved itself in the marketplace. Very versatile, being used for both spring and autumn production. Ramrod is also exceptionally winter hardy, making it a good variety for drilling in the autumn. Additionally, it can be used for producing larger, bolder type salad onions, especially if overwintered and left to develop in the early spring. Very popular and a superb stablemate to Eiffel.

A. cepa x *fistulosum* variety

ONI 30 Guardsman

A very distinct and innovative variety from the Tozer Seeds breeding programme. Guardsman combines the non-bulbing qualities of *A. fistulosum* varieties and the reduced pungency qualities of *A. cepa* types. A vigorous root system helps to maintain the strong, upright, dark blue-green leaves which make this variety not only suitable for the summer cropping period, but also ideal for autumn crops when disease can be a particular problem.

A. fistulosum varieties

ONI 105 Summer Island*

A Japanese salad onion selected by Tozer Seeds for summer and autumn production. Summer Island has a sweet flavour and low pungency giving it more consumer appeal. Good green colour and very upright habit.

Brussels sprouts

BRASSICAS

Tozer Seeds offers a range of high yielding Brussels sprouts varieties to cover all maturity slots from August until March (in Northern Europe). Our early Brussels sprouts varieties are recognised for their suitability at different latitudes. If you are looking for varieties with flavour and good field performance there is a good selection available.

NEW

BRS 235  **EARLY**

Churchill F1 TZ 0151

A first early variety, maturing late August to October. Churchill produces good yields of tight, evenly spaced buttons with a superb flavour.

BRS 15 Bosworth F1  **MID**

A midseason variety maturing before Trafalgar. Has excellent holding ability with firm, smooth, dark green, sweet tasting buttons. Shows intermediate downy mildew and ringspot resistance.

BRS 105 Red Bull  **MID**

Specialist variety producing red sprouts which improve in colour after cold weather. An OP variety which has proven itself in the marketplace.

BRS 185 Trafalgar F1  **MID/LATE**

Tall, erect, late mid-season variety with strong root system. Medium size smooth buttons of excellent flavour. Intermediate resistance to powdery mildew.

Broccoli Purple sprouting

This product is already cultivated in large acreages across the UK but is still in its infancy in other areas around the world. Purple sprouting broccoli is a very tasty brassica type and requires similar production techniques to other broccoli varieties. Tozer Seeds offers various OP and hybrid varieties for harvest from July until May. The stems of purple sprouting broccoli are very tender and ideal for stir fry or simply as an accompanying vegetable.

NEW

BRO 121 **TZ 7037 F1** **EARLY**

This variety has been outstanding for the often difficult late autumn cropping period of October and November, however from sequential sowings it can be cropped from late July onwards. The colour, yield and stem qualities of this variety make it an excellent choice.

BRO 75 **Early Rudolph** **EARLY**

Bred to perform well in the September to February period but is at its best from November to February. Produces good sized spears ideal for fresh market sales and prepack. Plants are large framed and suit fertile, heavy soil types.

BRO 65 **Red Admiral F1** **MID**

Our first hybrid introduction, Red Admiral is best suited to cropping in the important mid November to end December cropping window. The vigorous plants produce prolific high quality spears with small heads ideal for the premium pre-pack market. The spears are medium sized, dark purple and have excellent texture and flavour. Red Admiral can be cropped over a reasonably long period and will yield average weights of 200-300g per plant depending upon time of year, location and season.

BRO 100 **Cardinal** **LATE**

Our latest cropping variety for harvest late March to May. Produces medium to large deep purple spears with very good flavour on large framed uniform plants. The spears are ideal for fresh market sales and prepack.

NEW

BRO 105 **Red Fire F1 TZ 5055** **LATE**

This outstanding winter hardy variety produces uniform, erect plants which mature from the end of January to start of March depending upon the sowing date and location. The stems are easy to pick with excellent colour and medium to large heads with 8-15cm stem diameter. It is generally best programmed for one main pick with a follow-up secondary pick after 10 days giving average yields of 300-350g per plant. Therefore we would suggest at least two sowings to extend the cropping period of this excellent variety.

BRO 117 **Summer Purple** **MID**

Summer Purple was bred for summer/autumn production, cropping late June to October depending upon sowing date, season and the location. A versatile variety with large frame and good yields over a long cropping period.

BRO 35 **White Star** **LATE**

Our own reselected stock to give quality spears in the April / May period.

White Sprouting

POINTED VARIETIES

Full Heart & Greens Production

CAB 375

Advantage F1

Hybrid variety for hearts production in spring and autumn as well as greens production for spring, summer and autumn. Good dark colour with neat appearance.

Cabbage

BRASSICAS

The cabbage breeding programme is currently focussed on pointed cabbage and savoy cabbages. We can offer competing varieties in various maturity windows and all varieties offer something different with a fabulous taste. Our breeding within the niches of this category will provide opportunities in various markets.

Green Production (Large Leaf Varieties)

CAB 540

Robin F1

m
EARLY

The earliest of the Tozer Seeds January King hybrids, maturing from October to February. Robin has solid medium sized heads which colour up quickly. Overall a superb January King cabbage.

CAB 675 Noelle F1

m
MID

Maturing from mid-October, Noelle is long standing with good head weight and colour. Ideal size for retail packs.

CAB 135

Marabel F1

m
MID

The original Tozer Seeds January King hybrid. High yielding and very long standing, Marabel matures from November onwards with a large dense head.

Green Ballhead Varieties

CAB 327

Sherwood F1

m
EARLY

Extremely versatile hybrid with solid dark green heads with a very sweet flavour. Average head weight of 1kg with short internal core. Crops August to October with good holding ability.

CAB 550 Consulate F1

m
LATE

Tundra type. Long standing with blue-green slightly savoyed heads. Winter hardy.

CAB 545

Embassy F1

m
MID

Very hardy, attractive heads with slightly savoyed foliage weighing on average 1kg and maturing October to March. Very good shape and colour with excellent culinary qualities, making this variety a great choice for growers.

Savoy Varieties

SCA 12

Providence F1

m
EARLY

An attractive dark blue-green mid-season Savoy with fine, deeply blistered leaves. Solid well filled, round heads of 0.7 – 1.2kg are produced, with a short core and excellent eating qualities.

SCA 104

Endeavour F1

m
MID/LATE

This was the first hybrid from the Tozer Seeds Savoy cabbage breeding programme. Late maturing with dark leaves and medium blister which hearts and stands well. Sow April to May for harvest late November to March.

SCA 110

Resolution F1

m
EARLY/MID

A mid-season Savoy for mid October to mid December harvesting. Mid-green and attractive with solid round heads. Sow April to May.

SCA 100

Endurance F1

m
LATE

Our latest Savoy variety. Produces small to medium, blue-green, compact heads, January to April. In trials it has been found to go into the winter small and then fills out with a good clean appearance.

Celery

A key product within Tozer breeding and with some of Europe's market leaders in our portfolio like Victoria F1 and Monterey F1. We are confident that we have varieties for the major production regions and markets. With the increasing market of snack celery and celery sticks for convenience food there is a large focus on breeding new material to fulfil this demand. Apart from this we are continuously working on improving slow bolting characteristics, flavour as well as storability.

CEL 55 Victoria F1

The UK's market leader for early and mid-season celery production. Mid green colour, tall with fleshy petioles. This quick growing hybrid has good standing ability, is slow to bolt from early plantings and performs well under difficult spring conditions. Victoria is one of the best flavoured celery varieties available.

CEL 150 Octavius F1

A mid green hybrid, medium height, bold and high yielding. Good results in late season. Sweet flavour. Can also be used for greenhouse production.

CEL 151 Remus TZ 6029

This is our newest introduction for early and main season cropping to run alongside Victoria. Extensive UK trials over the past four seasons have shown this variety to be quick to mature and gain weight early in the season and often slower to bolt than Victoria. With similar colour and texture to Victoria as well as excellent eating qualities and we believe this variety will be a great addition to our range.

NEW

CEL 152 Hadrian TZ 9077 F1

Hadrian is the newest darker green celery variety. As well as showing good height and excellent weight in trials in Southern Europe it has also proved to be slow bolting. Extensive trials are continuing across Europe and the USA where it shows good resistance to Fusarium. Hadrian has shown good potential as a summer variety and is less prone to producing side shoots than other varieties.

NEW

CEL 125 Monterey F1

This variety performs well in Southern Europe and is the market leading variety in Spain. It is a dark green vigorous variety. Attractive, very fleshy tight sticks hold well in the UK in autumn.

CEL 130 Loretta F1

Self blanching hybrid. Vigorous and quick growing with succulent, smooth and upright sticks. A bold attractive variety with good flavour.

Courgette

A large range of different shaped and sized courgettes and marrows bred for earliness and performance in different climates. All varieties have been bred to produce unique characteristics and excellent flavour.

NEW

Standard Dark Green Varieties

COU 107 British Summertime

The earliest fruiting courgette in our trials, British Summertime has been bred to yield an abundance of fruit even in cold weather conditions. The plant habit is an exceptionally open spine-free bush which improves air circulation, reducing the incidence of disease and fruit rot, allowing for the rapid picking of top quality dark green fruit.

COU 130 Midnight F1

High yielding variety. Dark green glossy fruits produced on very compact, completely spineless plants. Easy to pick.

COU 22 Tuscany F1

High yield of very dark straight fruits. Erect plant, open habit, easy to pick with very few spines. Commercial trials have shown wide adaptability for the UK and European markets.

Speciality Varieties

VMA 40 Piccolo F1

A real dual-purpose variety. Produces an abundance of nearly round green striped courgettes which are a great shape for kebabs. These fruits can also be left to rapidly mature into small round marrows which are perfect stuffed. A neat spine-free bush habit makes this variety easy to grow and perfect for container sales.

PMP 250 Summer Ball F1

Produces very attractive, round, yellow courgettes from a bush habit. These can be left to mature into mid-sized pumpkins.

COU 119 Alfresco F1 4044

High yields of very pale green 'white' fruit which have higher dry matter content than standard dark green varieties, resulting in superb eating quality.

COU 112 Sunstripe F1

Wonderfully vibrant golden yellow striped tasty fruits are produced from spineless bush habit plants. Great uniformity for shape and a high yielding variety with great flavour and texture.

COU 121 Royal Flush F1 TZ 9973

Bred to produce high yields of baby courgettes which are perfectly proportioned miniatures of standard courgettes. Can also be left to form larger fruits.

Marrow

VMA 30 Bush Baby F1

Attractive baby marrow with a bush type habit and good flavour. Bush Baby has been bred to satisfy the market requirements for a smaller marrow. Approximately three quarters the size of a standard variety, Bush Baby is suited to both field and container production and produces a high count of fruits per plant over the season.

VMA 20 Tiger Cross F1*

An early variety with highly uniform mid green and cream striped fruits. The first hybrid to have intermediate resistance to Cucumber Mosaic Virus. It is now very popular and is grown across the UK and Europe.

VMA 15 Zebra Cross F1

The first hybrid marrow bred by Tozer Seeds. Replaced Cobham Long Green Bush and is earlier, more prolific and more uniform. Attractive dark green and cream striped fruits.

Butternut Squash

CUCURBITS

Tozer Seeds is the only company actively breeding butternut squash for Northern European as well as Southern European production. We trial an extensive amount of winter squash from around the world. The long storage potential for winter squash allows for an extended sales period that can continue from harvest through to spring the following year for some cultivars under the right conditions. Research is currently being carried out to develop earlier fruiting and maturing butternut varieties as well as niche types such as Coquina squash. Tozer Seeds offers varieties both for fresh market and the processing industry.

WSQ 91

Sweetmax F1 TZ 9088

The latest addition to our early maturing butternut range. This processing type has large 3 kg fruits with great internal colour and flavour. This traditional shaped butternut grows on a full vine plant and has the potential to produce a large amount of uniform fruits..

WSQ 103 Hunter F1

Bred by Tozer Seeds for the Northern European climate. Up to four weeks earlier to harvest than American hybrids. Fruits average 800g to 1kg with a very high level of marketable fruits and a heavy total yield.

WSQ 114 Harrier F1

Another variety from our breeding programme. Harrier is the earliest maturing variety available with good yields and attractive fruits. Very well suited to the Northern European climate. Approx size 800g.

WSQ 129

Autumn Crown F1

Autumn Crown produces an abundance of attractive early maturing butternut-coloured scalloped fruits each weighing around 2kg from reduced vines. The long-storing fruits have a unique 'sweet melon' aroma when cut and the flesh is deep orange with a small seed cavity.

Lettuce

LEAF

Tozer Seeds have been breeding lettuce for over 50 years and were among the first to introduce mildew resistance. We continue to work hard to introduce more resistant varieties but also concentrate on enhanced texture, flavour, shape and colour. This attitude to breeding has led to the introduction of internationally grown varieties such as Ashbrook and Osterley. Our assortment is mainly focussed on midi cos types for full size as well as baby leaf.

Cos/Romaine Varieties

Listed in order of size (smallest first)

LET 410 Claremont

Small Cos/Romaine type with crisp leaves, excellent vigour and very good resistance to bolting. Very neat appearance with little waste and good uniformity.

Mildew resistance: BI 1-5, 7-11, 17 and LMV resistant.

Red Leaves

NEW

LET 192 TZ 9193

A new baby leaf lettuce variety with distinctive dark red leaves of a broad teardrop shape and a wavy margin. The colour extends well down the leaf at baby leaf stage and the burgundy colour contrasts well with a bright green base at whole head size.

In the field this variety has always been an eyecatcher with a good mildew package BI 1-12, 17, 18, 22, 24, 25, 28-30.

LET 52 Cos TZ 1804

An intense dark red slender leaf with a very erect habit. Mildew resistance: BI 1-16, 19, 21 and 23.

Non Heading Green Varieties

LET 38 Ashbrook

A light green, very upright, well textured frilly oakleaf variety. Leaves are thick and waxy with shallow lobes and superb crunchy texture. Good for processing after de-coring.

Mildew resistance: BI 1-11, 13, 15, 17 and LMV resistant.

Baby Leaf Lettuce

LET 313 Osterley

A dark green, thick, crunchy cos leaf with a teardrop shape, slightly blistered and cupped. Ideal for processing and improving bag fill. Plants have a very upright habit, ideal for harvesting. Excellent mildew resistance.

Mildew resistance: BI 1-15, 17-19, 22, 24, 25, 27-31 and LMV resistant.

Rocket

LEAF

Tozer Seeds is at the forefront of developing and breeding new rocket varieties. We aim to develop a selection of varieties, providing supermarkets with a hotter flavour and more interesting leaf shapes for salad packs; providing the grower with an easier plant to grow that is more vigorous, slower bolting and with darker leaves. We have also introduced the first mildew tolerant varieties with high vigour which has been a true revelation in the industry.

Salad Rocket

NEW

ROC 32

TZ 0473 Fireworks®

Delivering an explosion of flavour, 'Fireworks' is the hottest salad rocket available and delivers the same taste as good wild rockets. It has the advantage of being fast growing even on colder soils, providing marketable product in around 6 weeks. Slow to bolt, 'Fireworks' gives excellent harvest flexibility and has a vibrant red leaf vein which is particularly prominent under hot conditions to give a real point of difference. The combination of flavour and visual appeal ensures this variety will always excite!

ROC 31 Astra TZ 0313

A fantastic vigorous salad rocket with a refined heavily serrated leaf shape, extreme bolting tolerance and a great spicy flavour. Fast to establish even on cold soils.

Wild Rocket

NEW

ROC 25

TZ 9029

Slow bolting under challenging mid-summer growing conditions and with superb vigour and flavour, TZ 9029 allows greater flexibility for wild rocket cultivation.

ROC 19

Dragon's Tongue®

A stunning new wild rocket with intense purple red veining on the leaf. Dragons Tongue® has a great flavour and is a real point of difference. Plant breeder's rights applied for.

ROC 61 Voyager

More vigorous, uniform and upright than standard varieties. Voyager is also slower bolting, thicker leaved and darker green. Plant breeder's rights granted.

ROC 42 Athena TZ 1441

Ground breaking work has been carried out by our breeding team to introduce to you our latest wild rocket addition with an important new feature. Athena has been especially bred to incorporate intermediate resistance to downy mildew. Trials throughout Europe, Oceania and USA have shown significantly reduced levels of mildew in the field compared to standard wild rocket varieties.

NEW

Kales

LEAF

Kales are currently undergoing a huge resurgence in popularity due to their fantastic nutritional benefits. Tozer Seeds predicted this trend some years ago and have reacted by the timely development of a brand new contemporary range of brightly coloured kales with fantastic leaf textures and unique eating qualities. All these new kales require only very light cooking and are well suited to modern culinary methods including stir-fry, steam and microwave. No need to boil them like traditional kales and are mild and sweet to eat with none of the traditional brassica bitterness associated with older kale varieties. The new kales work well in shredded mixed leaf packs where the fantastic colours and textures will be sure to catch the customer's eye and the fantastic flavours will guarantee repeat purchases. Cultivation of the new Tozer kales is identical to traditional kales, using the same sowing dates and spacings and they are all very winter hardy. They are also very versatile, with all varieties being suitable for harvest from young plants to full-grown mature leaf.

Cavolo nero

NEW

FOR TRIAL

KAL 014 TZ 2019 F1

The F1 hybrid cavolo nero from Tozer breeding has very uniform, thin, dark and well textured leaves which are perfect for bunching. This plant has a neat, rosette shaped plant habit which is easy to harvest. Twilight is cold weather resistant and can stand tougher conditions. Bolt resistance is also high for this variety.

KAL 022

Black Magic TZ 9096

A fantastic British bred variety of the very popular Cavolo nero with vastly improved uniformity and plant habit. Black Magic has striking dark, narrow, well textured leaves and improved bolting resistance and cold tolerance. Plant breeder's rights applied for.

Buttonhole Kale®

NEW

KAL 003

TZ 8011

Forms a small rosette head that makes a fantastic high value product for contemporary dining. Bold, bright pink ribs contrast against the dark green sweet leaf. The outer leaves can also be cut and used as a colourful shredded product to give added value.

Coloured Kale

NEW

KAL 017

TZ 9332

An amazing new variety that has the best eating quality of all kales. The textured, ruffled leaves develop a striking contrasting white centre as they mature and have a very sweet flavour, even the leaf stalks are very sweet and have the crispest texture. The very ruffled leaves give great bag-fill. This variety is also suitable for multiple cuts.

NEW

KAL 018 TZ 0277

A stunning variety with a deep red textured leaf and a striking pink mid vein. Suitable for multiple cuts, Midnight Sun is very versatile. It is the best variety for use as a baby leaf kale but also works well as a mature plant.

NEW

KAL 009 Pentland Brig

Pentland Brig is an old-fashioned variety that we have rediscovered and are now selling because of its unique sweet taste. It is slightly less curled than most standard kales and has a distinct paler leaf yet it is extremely winter hardy.

It can be sown from March onwards either as a standard kale and the whole leaves used or shredded, or grown on closer spacing and used at 'teen' leaf size. As young leaves it can be eaten raw, whilst all leaves taste great lightly stir-fried or steamed to retain their natural goodness.

Herbs

LEAF

Within the herbs category, Tozer Seeds specialise in coriander and basil varieties. Coriander Calypso was a breakthrough variety and is widely recognised as the slowest bolting available. It also has a low growing point making it suitable for 'cut and come again' production. Our work on coriander has also led to the innovative Confetti® type, ideal for baby leaf salads.

Our development of basil has led to the introduction of Crimson King, the most uniform and best tasting red available. Much of our basil work is now focused on producing varieties more suited to Northern European climate and more able to withstand damage during processing, British Basil is the latest example of this work.

BAS 101 Crimson King

Basil

NEW

Tozer Seeds bred, red Genovese type basil with excellent flavour and no green 'off types'. Improved colour, leaf shape and vigour.

**BAS 104
British Basil TZ 6098**

Selected to be suitable for growing outdoors in UK conditions. British Basil has a very robust, bright green leaf that is more resistant to colder conditions but retains a traditional intense flavour.

Coriander

CDR 02 Confetti®

Developed by Tozer Seeds to have frilly leaves and a subtle taste. Confetti is ideal for use as a garnish or for use in baby leaf packs. Its unique shape means that it is less susceptible to leaf damage than other corianders.

CDR 03 Calypso

A Tozer Seeds bred variety which is significantly slower to bolt than any other coriander available. It also has a low growing point making it suitable for 'cut and come again' production.

Chard

LEAF

The versatility of chard as a baby leaf brings colour and flavour to salads. The mature stems have an improved flavour, great texture and can be steamed or stir-fried. Our breeders are developing varieties with different coloured petioles. A full range of varieties and colours are now available.

SPI 112 Red/Rhubarb Chard Intense

Rounder leaf than standard Rhubarb Chard with intense red veining, as with Elite this variety has far fewer green 'off-types' than the standard.

SPI 111 Rhubarb Chard Elite

The leaves are more rugose than standard Rhubarb Chard and more uniform in leaf colour, this variety also has far fewer green 'off-types' and a greater standing ability.

Parsley Curled Varieties

PLY 15 Bravour

An outstanding variety with dark green, finely curled foliage said to have exceptional flavour. For spring, summer and overwinter use. Grows to form a compact plant.

PLY 25 Robust

Densely curled dark green foliage. Strong stems make this a very useable variety for bunching throughout the year.

Cress

CRE 12 Olympus TZ 6085

Slow to bolt, with a very attractive semi-frilled leaf, Olympus has a great pungent flavour that adds a real kick to salads.

Runner Beans

LEGUMES

The Tozer Seeds runner bean breeding programme is the most extensive anywhere in the world. We have created a new generation of varieties with improved pod set, smoother fleshier pods, reduced string and enhanced flavour. Moonlight (white flowered) and Firestorm (red flowered) are excellent examples of the latest breeding work. This work has essentially re-invented the runner bean for a wider range of consumers.

White Flowered Varieties

RNB 103 Moonlight

The culmination of many years of breeding work, Moonlight is the earliest variety of a new line of runner beans which contain some of the attributes of climbing French bean types. This gives Moonlight all the flavour of a runner bean plus the potential for some self-pollination. The pods produced are very smooth and fleshy and approximately 25cm long. Plant breeder's rights granted.

NEW

RNB 115 Snowstorm TZ 8005

A white flowered variety with longer pods of up to 30cm. Snowstorm has vastly improved set and eating quality compared with traditional runner beans, as a result of the incorporation of French bean genetics. Great texture and very smooth pod finish.

RNB 35 White Emergo – Snowy

Our own reselected and improved stock of this universally grown, white flowered variety. The pods are 24 to 28cm in length, smoother and better quality than other selections on the market. It performs and yields very well under higher temperatures, making it a good variety to grow in Africa and in the ever increasing temperatures of the British summer. Particularly good on heavier land, where other varieties struggle.

RNB 70 White Lady

This is one of the best tasting runner beans available. White Lady gives a high yield of good quality 28 to 30cm long smooth pods, with little fibre and a good snap.

Red Flowered Varieties

RNB 116 Firestorm

Our first red flowered runner bean variety produced as a result of our innovative cross between a runner bean and a French bean, Firestorm easily sets huge quantities of top quality 25cm pods. Plant breeder's rights applied for.

RNB 95 Aintree

Producing large yields of slender, smooth, straight pods of good colour, Aintree's excellent flavour makes it a very popular variety. The pods are 25 to 28cm in length but can be longer if grown with high inputs. It sets well, even in higher temperatures.

Pink Flowered Variety

RNB 100 Celebration

Salmon pink flowered runner bean Celebration not only looks attractive but is a very heavy cropping variety. With high quality pods of 25cm it is ideal for the pre-pack market. Plant breeder's rights granted.

Parsnip

ROOT

The development of new and improved parsnip varieties has been important in the history of Tozer Seeds and we continue to put great emphasis on this category. We pioneered the development of F1 hybrid varieties with the release of Gladiator in 1982 and the very successful Javelin in 1991, followed by Albion and Dagger. We are continuing to develop new hybrids with good vigour, canker resistance, shallow crowns, smooth skin, resistance to bruising and white roots of uniform shape and size. The latest varieties are now in trial and available for you to review.

F1 Hybrid Varieties

PNP 173 Javelin F1

Consistent, reliable, flexible and very well proven. Javelin is probably the most commercially successful parsnip variety ever. Javelin produces an obtriangular slender wedge shaped root; ideal for the pre-pack market. Shallow to level crowns make for easy cleaning and the skin appearance is white to very light cream in colour with excellent canker resistance. Javelin can be sown throughout the sowing year and its tremendous field holding capacity means it can be cropped almost continually from July to June.

PNP 190 Albion F1

Albion has a very white skin finish which is noticeably slow to discolour. Roots are of an obovate shape which taper nicely, filling well down the root length making it suitable for retail trade and also popular for processing. Albion produces heavy yields and is suitable for early to main season sowing with lifting from autumn to mid-winter.

PNP 172 Gladiator F1

Gladiator presents a refined regular obovate root shape with white skin and strong resistance to root canker. It is very early bulking and is ideal for lifting through to late autumn in the UK.

All the varieties are available in the following forms:

- (a) Natural seed – Ungraded, well cleaned but contains a few bits of stick
- (b) Super clean and graded seed – For precision drilling. Several grades normally available
- (c) ProCoat Pellet – Minimum coating for better germination and precision drilling, particularly for air drills. Coloured bright pink, or blue if it contains an insecticide
- (d) Priming – If sufficient notice is given, seed can be primed for faster emergence
- (e) Polymer Coating – To ensure the adherence of agrochemicals to the seed surface special polymers are applied, these also aid the flow of seed in the drill.

Open Pollinated Varieties

PNP 174 White Spear

White Spear has very white smooth skin and bulks extremely rapidly in the spring from an early sowing. Its root shape is obovate. It is best lifted in the early summer months. Later sowings will hold into the autumn but the growing is always short. White Spear will continue to grow past the ideal market size and can produce enormous roots if allowed to grow on.

Beetroot

ROOT

Tozer Seeds breeders have been selecting and refining our range of beets for many years producing excellent and trusted varieties for the professional grower and are now focusing on hybrid beetroot varieties.

Multigerm Beet

BEE 80 Boston

Renowned Tozer Seeds Boltardy selection, smooth skinned, round roots with excellent internal colour. Slow bolting so can be used for an early crop.

Carrot

ROOT

Our carrot varieties include the popular hybrids, Flyaway and Resistaflly. These varieties are ideal for farmers markets and hobby gardeners.

CAR 130 Resistaflly F1*

Tozer Seeds' latest carrot variety with intermediate root fly resistance. A Nantes hybrid with long, well coloured and smooth roots

CAR 125 Flyaway F1*

Flyaway combines roots of attractive shape, colour and smooth skin, with intermediate resistance to carrot root fly. The variety has been bred to be less attractive to the egg laying flies and the maggots grow poorly on it.

*also available as organic seed

Radish

ROOT

Tozer Seeds radish programme has recently been rejuvenated. Our breeding effort aims to develop round red hybrids which are uniform, globular shape and are slow to go pithy. We are also developing a range of different coloured radishes.

Round Varieties

RAD 114 Venus TZ 8130 F1

This hybrid radish has bright round red roots with a thick skin and a small crown. Quick to mature and with an excellent sweet flavour. Works well on various soil types.

NEW

Round Coloured Varieties

RAD 103 Amethyst

Striking purple skinned variety that contrasts very well with the crisp white flesh. Slow to go pithy, good shape and strong tops. Plant breeder's right's granted.

RAD 104 Lunar

Interesting pure white variety, good shape and uniformity. Nice crisp texture contrasts very well with the purple and red varieties in a mixed pack. Plant breeder's right's applied for.
