

# Climbing Helda Bean

## Ogden

### General Description:

This flat podded Helda bean showed significantly higher yields in trials than all other commercial varieties with improved pod quality characteristics and improved tolerance to wind damage. It produces smooth, stringless pods 20 to 25cm in length. Sow February to crop under glass and sow April to May outside, producing heavy crops July to September.

### Profile:

<b>Colour of Flower</b>	White	<b>Days Maturity</b>	75-95 (approx.)
<b>Pod Length</b>	20-25 cm	<b>Cropping Period</b>	July-September
<b>Pod Width</b>	2-2.5 cm		
<b>Stringless</b>	Yes		

The information that has been provided is an average of the data gathered from various trial locations. Please be aware that variations in the growing environment and climatic conditions can render this information inaccurate, it is intended for general guidance only.
