Sowing rate:	7kg per ha

Field of Caliente
on left and new
improved Caliente
Rojo on the right

- Bred to produce up to 10% more Isothiocyanates and even more biomass in a shorter growth period than our most popular and proven variety Caliente 199
- Can produce 80 tons per ha of fresh weight biomass if given sufficient nutrients and water
- Manages a wide range of soil pests, diseases and weeds, through correct incorporation
- Feeds the important soil biota to help improve soil structure, water holding and drainage capacity and nutrient release
- Caliente Rojo will complement our other biofumigation/nematode trap crops products in the Caliente stable.
